Claims 24-31 have been withdrawn as non-elected claims.

Claims 1-3 and 5-16 are pending in this application.

Claims 1-3 and 5-10 are allowed.

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

### ***Amendments***

The application has been amended as follows:

#### **In the claims:**

1. (Previously Presented) A method of logging and trending real time measurement data, the method comprising:

a logger application executing on a first computer system receiving a measurement stream comprising a plurality of real time measurement data

values, wherein the plurality of real time measurement data values are acquired from a physical system by a measurement device;

the logger application writing portions of the plurality of real time measurement data values to respective shared memory sections of a memory in the first computer system in a modular fashion;

wherein each of the portions of the plurality of real time measurement data values in each of the respective shared memory sections is independently accessible by a trender application executing in a second computer system;

initiating the trender application on the second computer system;

the trender application generating a query request for a first portion of the plurality of real time measurement data values;

the first computer system sending a single message to the second computer system, wherein the single message comprises the first portion of the plurality of real time measurement data values, wherein the first portion comprises two or more of the real time measurement data values;

the trender application receiving the single message comprising the first portion of the plurality of real time measurement data values;

the trender application displaying the first portion of the plurality of real time measurement data values.

2. (Previously Presented) The method of claim 1, wherein each of the portions of the plurality of real time measurement data values in each of the respective shared

memory sections is independently accessible by a trender application executing in a second computer system using a single network message.

3. (Previously Presented) The method of claim 1, wherein each of the portions of the plurality of real time measurement data values in each of the respective shared memory sections independently and accurately represents a subset of the measurement stream.

4. (Cancelled)

5. (Currently Amended) The method of claim ~~4~~ 1, wherein the single message is a delta page.

6. (Currently Amended) The method of claim ~~4~~ 1, wherein the logger application receives the measurement stream and writes the portions of the plurality of real time measurement data values to respective shared memory sections of the memory at a first data rate;

wherein the trender application generates the query request for the first portion of the plurality of real time measurement data values at a second data rate, wherein the second data rate is less than the first data rate.

7. (Original) The method of claim 6,

wherein the first computer system sending a single message to the second computer system comprises:

a first observer software program executing on the first computer system querying the memory for a most recent portion of data at the second data rate; and

the first observer software program sending the most recent portion of data to the second computer system at the second data rate after said querying the memory;

wherein the trender application receiving the single message comprises:

a second observer software program on the second computer system receiving the most recent portion of data at the second data rate from the first observer software program; and

the second observer software program writing the most recent portion of data to a memory location.

8. (Original) The method of claim 7, wherein the memory location is a database.

9. (Previously Presented) The method of claim 1, wherein the trender application is operable to partially replicate the plurality of real time measurement data values comprising the measurement stream.

10. (Previously Presented) The method of claim 1, wherein the logger application writing portions of the plurality of real time measurement data values to respective shared memory sections of a memory in the first computer system in a modular fashion comprises:

creating a header record comprising a series of bits, wherein the bits in the header record indicate a changed status of the respective shared memory sections;

the logger application writing the header record in the shared memory.

11-31. (Cancelled)

### ***Response to Arguments***

Applicant's arguments, filed December 21, 2007, with respect to claims 1-3 and 5-10 have been fully considered and are persuasive. The rejection of claims 1-3 and 5-10 has been withdrawn.
